About me

Computer software engineer with wide technical expertise in low-level programming, embedded systems, computer networks, database systems, and computer architecture.

Technologies

OS

GNU/Linux
FreeBSD
Windows

Languages

English (Very Fluent)

IELTS: 7.5 — CLB: 8

Arabic (Native)

Italian (Beginner)

Education

2011 - 2016 **B.Sc., Computer and Systems Engineering**

Alexandria University

Rank: Valedictorian

GPA: 3.94/4.00

WES Evaluation: Completed on March 2nd, 2018

Graduation Project: **FPGA** computer based on **MIPS** architecture

Experience

2018

Software Engineer

SoundHound Inc., Toronto

Mainly working on high-end Speech Recognition and Natural Language Processing products. Some of the job responsibilities included:

1. Leveraging my **C/C++** programming skills to develop server-side **NLP** modules.
2. Provide **Linux** technical expertise to the automation of various processes.
3. Manipulating and managing large databases and information systems.

2017

Research Assistant - Networks and Systems

SFU, Vancouver

Implementation of an LTE base station using *Ettus B210 USRP* and *OpenAirInterface*.

2017

Control Systems Engineer

Advanced HVAC Consultant, Cairo

Implementation of feedback control loops for **HVAC** systems using *Fupla* (function block diagrams) on *Saia Burgess PLC* devices.

The work included:

1. Control loops for airhand units (fans, valves, and sensors).
2. Interfacing *Saia Burgess PLCs* and *Honeywell Eagle DDCs* using **Modbus** and **Bacnet/IP**.
3. Instructing our teams on the implementation of electrical boards composed of **high-voltage relays** and networks of **PLCs**.

2016

Software Engineer

Ejada Systems Ltd., Alexandria

Providing enterprise solutions to banks in the Middle East, including:

1. Implementation of **CRM** systems using **Oracle Siebel**.
2. Developing **BigData** solutions using **Hadoop** and **Scala**.

2015

RA Intern

SmartCI Research Center, Alexandria

Programming the storage system of a cognitive radio cloud, which consisted of **Linux** nodes with **ext2fs**, using **IP multicast** and **filesystem-aware data compression**.

Selected Projects

- Quafios: An **Operating System** for x86 and MIPS. The system included:
 - Implementation of a UNIX-like **system call** interfaces.
 - **Device drivers** for PCI, USB, ATA, timers, interrupt controller, keyboard controller, and other hardware components.
 - Dynamic kernel-space and user-space **memory allocation** algorithms.
 - Implementation for **C library** routines.
 - A GUI, with a programmer-friendly API.
- CDP: **Linux kernel driver** implementation for a reliable Data Transfer Protocol.
- System for OS image distribution over **cloud network** using Frisbee.
- Radio KAOS: **Cognitive Radio** with Dynamic Spectrum Sharing Engine.
- **Compiler** for a subset of **C** and **Java** Programming Languages
- Designed a Linux kernel device driver and synchronization assignment for OS course at Alexandria University.
- Liftroid: Visualized elevator Android interface with **AVR**.
- Technical Report on Unified Extensible Firmware Interface (**UEFI**).
- Systema: Educational system-level **programming language and compiler**.
- Hello World **BIOS**.
